1. Introduction

1) Two Working Modes:
A: Fixed Password Mode: Password is fixed until you change it. Normally for private places use (Home, office).
B: One-Time Password Mode: Enter any password to lock it, then same password to unlock. Password is one-time use. Normally for public places use (Storage cabinet in supermarket, GYM locker room, etc.)

2) Password Type:
A. User Password: Used to lock/unlock a cabinet
B. Admin Password: Used to set the lock and for emergency unlock if forget admin password
C. Hopping Password: Used for emergency unlock if forget both admin password and user password

3) Default Password (After Initialization):
Factory Admin Password: 88888888
Factory User Password: 1111

4) Password Length: 4~15 digits.

5) Unlock: Enter password and press #

2. Preparation

Load 4 pieces of brand new AA alkaline batteries to the lock body.

3. Initialization

For bulk order, all locks initialized in our factory before shipping. So you don’t have to initialize it unless necessary.

Operation: Press and hold the reset button for 3 seconds, release the button when you hear a beep, then there will be another beep, then the lock will be reset to Factory Mode.

You can now enter default admin password 88888888 or use password 1111 and then press # to unlock to test.

4. Modify Admin Password

Enter “12#” → old admin password and “#” → new admin password and “#” → new admin password and “#”

5. Switch Working Mode

For bulk order, we can switch it to your preferred working mode in factory before shipping.

Enter “14#” → Admin Password and “#”.
Repeat the operation to switch working mode between fixed password mode and one-time password mode cyclically.
Note:
- If switched from fixed password mode to one-time password mode, the latch will get (stay) inside the lock body.
- If switched from one-time password mode to fixed password mode, the latch will get (stay) outside the lock body.
- After you switch it from one-time password mode to fixed password mode, Admin Password will stay the same, but user password will be changed to “1111”.

6. Modify Fixed User Password

Switch it to fixed password mode if it is not.
Enter “11#” → old user password and “#” → new user password and “#” → new user password and “#”

Note:
- The length of password is 4-15 digits
- If under one-time password mode, don’t need to modify user password.

7. Lock & Unlock Under Fixed Password Mode

1) Enter password and press #, latch gets inside lock body, pull cabinet door to open.
2) Latch will get outside automatically in 3 seconds after unlocking, push cabinet door to close.

Note: If enter wrong number, press * to end operation, then enter correct password from beginning again.

8. Lock & Unlock Under One-Time Password Mode

Switch it to one-time password mode if it is not.
1) Enter any password and # to lock it (latch gets outside) and remember the password.
2) Enter the same password and # to unlock (latch gets inside). And password get invalid.
3) You can then repeat the above operation to set a new password to lock/unlock.

Note: If enter wrong number, press * to end operation, then enter correct password from beginning again.

9. Emergency Unlock

1) If forget user password, you can use Admin Password to unlock for emergency.
2) If forget both user and admin password, contact us to get hopping password to unlock for emergency.

Note: After using Admin Password to unlock, the fixed user password will return to Factory User Password: 1111
10. Status-Remind Function

This function is only for one-time password mode. The lock will remind user that the cabinet (lock) has been occupied with red light blinking slowly.

Enter “16#” → Admin Password and “#”
Repeat the same operation to cancel or activate the function.

11. Messy Password Function

After setting messy password function, you can enter some messy/fake number before and after the correct password when unlocking. For example: The correct password is 1234, you can enter 39-1234-08 to unlock.

Enter “15#” → Admin Password and “#”
Repeat the same operation to cancel or activate the function.

12. Tips

- Low Voltage: You can enter password, but can not lock/unlock. You need to change battery.
- Battery Dead: Connect a battery pack to lock panel with an Android USB cable to supply power to unlock
- Password Protection: Enter wrong password 5 times continuously, the lock will be unworkable for 20 minutes.
