1. Introduction

1) This lock works with both card and password
2) Card Type:
   A. Master Card: Used to add/delete management card and emergency unlock
   B. Management Card: Used to add/delete password and emergency unlock
3) Password Mode: Fixed Password mode and Temporary Password mode
4) After initialization, if you don’t set fixed password, it will be temporary password mode.
   (and vice versa)

2. Preparation

Load 3 pieces of AAA alkaline batteries

3. Initialization

Press and hold the reset button for about 1.5 seconds, there will be a short music
Note: Quick press on the reset button with 2 short music is self-testing. You may ignore it.

4. Add Master Card

After initialization, the first card you read to the lock will be master card, If added successfully, there will be 4 beeps.

Note: One master card available. Keep it safe!

5. Add Management Card

Read master card twice, red light blinks, then read an unregistered card with one beep as management card.

Note: Three management cards available. Keep it safe!

NOTE: Only after you set master card and management card, can you continue the password operation below!

6. Lock by Temporary Password

1) Make sure the knob is at “Open” position
2) Enter a temporary password (eg:2580) and then press “#” button to confirm with 2 beeps and a short music
3) Push to close the locker door and turn the knob to “Close” position

7. Unlock by Temporary Password

1) Enter the same password (2580) and press “#” button to confirm with a short music
2) Turn the knob to “Open” position and pull the locker door to open.

Note: Temporary password is just for one-time use.

8. Unlock By Management Card or Master Card

If forget password, you can read management card or master card once with a short music to unlock for emergency. (Before the red light stops blinking, no other operation) Then you can set a new temporary password to close the locker again.

9. Set Fixed Password

Situation A: If you can turn the knob at will:
1) Turn the knob to “Open” position,
2) Read management card twice, red light blinks, press “*” button once, enter a fixed password (eg: 1234) and press “#” button to confirm with 2 beeps.
3) Enter the fixed password (1234) and press “#” button with a short music.

Situation B: If you can not turn the knob at will:
1) Read Management card once, red light blinks, press “*” button once, enter a fixed password (eg: 1234) and press “#” button to confirm with 2 beeps.
2) Turn the knob to “Open” position
3) Enter the fixed password (1234) and press “#” button with a short music.

10. Lock By Fixed Password

1) Push to close the locker door, then turn the knob to “Close” position

11. Unlock by Fixed Password

1) Enter fixed password and press “#” button to confirm with a short music
2) Turn the knob to “Open” position and pull locker door to open
12. Unlock by Management or Master Card

If forget password, you can read management card or master card once with a short music to unlock for emergency. (Before the red light stops blinking, no other operation). Then delete the fixed password (see below steps) and set a new one.

13. Delete Fixed Password

A. If the lock itself is not locked (you can turn the knob at will):
Read management card 3 times and ended with 3 beeps

B. If the lock itself is locked (you can not turn the knob at will):
Read management card 2 times and ended with 3 beeps

Note: After you delete fixed password, the lock will be under Temporary password mode if you do not set fixed password.

14. Delete Management Card

A. If the lock itself is not locked (you can turn the knob at will):
Read master card 3 times and ended with 3 beeps

B. If the lock itself is locked (you can not turn the knob at will):
Read master card 2 times and ended with 3 beeps

Note: The password will be also deleted and the lock will be under Temporary Password Mode if you do not set fixed password.

15. Delete Master Card

Initialize the lock

Note: management card and password will be also deleted.

16. Other Functions

1) Emergency Unlock:
   A. Batteries exhausted: There is external power supply contact on the lock, you can use a 9V battery to supply power for emergency unlock.
   B. If forget password: Use management card or master card to unlock.
2) Low Voltage Alarm:
If voltage lower than DC3.3V, when you unlock, there will be groups of beeps to remind you changing battery.

3) Password Protection:
If input wrong password or read invalid card for 3 times continuously, there will be 60s alarm sound, and the PCB of lock will be froze. There is no reaction even if you press the buttons. (You can read master card or management card to lift the alarm and freeze)
