1. Introduction

1) This lock works with both card and password
2) Card Type:
   A. Master Card: Used to add/delete Management card, and switch password mode.
   B. Management Card: Used to delete password and unlock for emergency
3) Password Mode: Fixed Password mode and Temporary Password mode
4) After initialization, it is Fixed Password mode by default.
5) Password Length: 9 digits at most. Consist of 0~9 numbers.

2. Preparation

Load 3 pieces of AA alkaline batteries

3. Initialization

Press and hold the reset button for about 2 seconds, there will be 3 beeps, and the latch gets outside and then inside.

4. Add Master Card

After initialization, the first card you read to the lock will be master card, If added successfully, there will be 3 beeps.

Note: One master card available. Keep it safe!

5. Add Management Card

Read master card once, then read an unregistered card as management card. If added successfully, there will be 1 beep.

Note: Three management cards available. Keep it safe!

NOTE: Only after you set master card and management card, can you continue the password operation below! Default password after lock initialization: 22115461

6. Set Fixed Password

Note: Before you set fixed password, if the latch is outside the lock body, read
management card once to make the latch get inside, then set fixed password after red light stops blinking. One fixed password available.

Press and hold the “#” button for 3 seconds, there will be one beep, then press “*” button, enter password and press “#” button to confirm with one beep. Fixed password set successfully.

※ After set fixed password, press “*” button once, then enter the fixed password and press “#” button to confirm. The latch will get outside of the lock body with 2 beeps. Then the lock can be put in use.

7. Unlock With Fixed Password

Press “*” button once, then enter the fixed password and press “#” button to confirm. The red light will be on and latch will get inside of the lock body with 1 beep, then get outside automatically after 4 seconds.

8. Modify Fixed Password

Press and hold the “#” button for 3 seconds, there will be one beep, then press “*” button, enter old password and press “#” button to confirm with 2 beeps. Press “*” button again, enter new password and press “#” button to confirm with 1 beep. Password modified successfully.

9. Unlock With Management Card

If forget password, you can read management card once to unlock for emergency. The latch will get inside with one beep and won’t get out.

Then Delete Fixed Password (see below) and set a new one.

10. Delete Fixed Password

A. If the latch is inside, read management card for 3 times, there will be 3 beeps, fixed password deleted.
B. If the latch is outside, read management card for 2 times, there will be 3 beeps, fixed password deleted.
11. Switch to Temporary Password Mode

Press and hold the “*” button and read master card meanwhile, there will be 2 beeps, switched to temporary password mode. (Repeat the same operation, there will be 4 beeps, switched to fixed password mode.)

Note: After switching from fixed password mode to temporary password mode, the fixed password gets invalid. If switching back to fixed password mode, you need to re-set fixed password again.

12. Set Temporary Password

Note: Before you set temporary password, if the latch is outside the lock body, read management card one time to make the latch get inside, then set temporary password after red light stops blinking.

Press “*” button, enter temporary password and press “#” button to confirm, the latch get outside with 2 beeps. (Then you can push to close the locker.)

13. Unlock With Temporary Password

Press “*” button once, then enter the temporary password and press “#” button to confirm. The red light will be on and latch will get inside of the lock body with 1 beep, but the latch will not get outside automatically.

Note: Temporary password is just for one-time use.

14. Unlock With Management Card

If forget password, you can read management card once to unlock for emergency. Then set a new temporary password.

15. Switch to Fixed Password Mode

Press and hold the “*” button and read master card meanwhile, there will be 4 beeps, switched to temporary password mode successfully.

16. Delete Management Card

Read master card twice, there will be 3 beeps, all management card (and password)
17. Delete Master Card

Initialize the lock
Note: management card and password will be also deleted.

18. Other Functions

1. Emergency Unlock:
   A. Batteries exhausted: There is external power supply contact on the lock, you can use a 9V battery to supply power for emergency unlock.
   B. If forget password: Use management card to unlock.

2. Low Voltage Alarm:
   If voltage lower than DC3.3V, when you unlock, there will be groups of beeps to remind you changing battery.

3. Password Protection:
   If input wrong password 3 times continuously, there will be 60s alarm sound, and the PCB of lock will be froze. There is no reaction even if you press the buttons. (You can read master card or management card to lift the alarm and freeze)

4. Lockpicking Alarm
   If someone press the latch when trying to unlock illegally, there will be groups of alarm sound and the lock will be froze. There is no reaction even if you press the buttons. (You can read master card or management card to lift the alarm and freeze)
