General Introduction

Working Way

If a locker (lock) is unoccupied, that is to say, the latch is inside the lock, you can read one blank key to lock it and read same key to unlock it. Then the locker (lock) becomes available for other users.

Key Type

※ User (Blank) Key (1 pc): Used to lock and unlock.
※ Management Key (3 pc): Used to unlock for emergency if user key get lost.

FYI

Normally, we will initialize the lock before shipping. And we will send you 3 management keys by default, in the shape of key fob. So after your got the locks, you can directly put them into use.

Operations

Load Battery

Load 4pcs AA alkaline batteries. Please use brand new battery. Don’t mix new and used batteries.

Lock & Unlock Test

Note: If you find the latch is outside, read management once to get it inside first.
Lock: Read any blank key once with 2 beeps, the latch will get outside.
Unlock: Read the same key once again with a short music, the latch will get inside.

Emergency Unlock

If user key get lost, you can use management key for emergency unlock.

Operation: Read management key once with 1 beep, blue light blinking slowly and the latch will get inside.

Note: Before the blue light stops blinking, do not read any key!

Reprogram Management Key

If management keys get lost, you can follow the steps below to program new ones.

1) Initialization: Press and hold the “Reset” button for 1s, release it after 1 beep, then come with 5 beeps.
2) Program Management Key: After initialization, read a blank key once with 2 beeps as management key.

You can program 2 more management keys if needed:
1) Read management key once, blue light blinks slowly.
2) Read another 1 or 2 blank keys with one beep for each reading as management card.
Note:
1) You can program the same management key to all locks as MASTER Key, then you can use the master key to unlock all the locks for emergency.
2) 3 management keys for each lock in total. DO NOT try to program more.

External Power To Unlock

If the batteries in the lock totally exhausted, you can connect an external battery case to supply power to unlock.
